1.7 Linear Independence **61**

Mastering: Linear Independence 1–31 In general, you should read a section thoroughly *several* times to absorb an important concept such as linear independence. The notes in the *Study Guide* for this section will help you learn to form mental images of key ideas in linear algebra. For instance, the following proof is worth reading carefully because it shows how the definition of linear independence can be *used*.

PROOF OF THEOREM 7 (Characterization of Linearly Dependent Sets)

If some \mathbf{v}_j in S equals a linear combination of the other vectors, then \mathbf{v}_j can be subtracted from both sides of the equation, producing a linear dependence relation with a nonzero weight (-1) on \mathbf{v}_j . [For instance, if $\mathbf{v}_1 = c_2\mathbf{v}_2 + c_3\mathbf{v}_3$, then $\mathbf{0} = (-1)\mathbf{v}_1 + c_2\mathbf{v}_2 + c_3\mathbf{v}_3 + 0\mathbf{v}_4 + \cdots + 0\mathbf{v}_p$.] Thus S is linearly dependent.

Conversely, suppose S is linearly dependent. If \mathbf{v}_1 is zero, then it is a (trivial) linear combination of the other vectors in S. Otherwise, $\mathbf{v}_1 \neq \mathbf{0}$, and there exist weights c_1, \ldots, c_p , not all zero, such that

$$c_1\mathbf{v}_1 + c_2\mathbf{v}_2 + \dots + c_p\mathbf{v}_p = \mathbf{0}$$

Let j be the largest subscript for which $c_j \neq 0$. If j = 1, then $c_1 \mathbf{v}_1 = \mathbf{0}$, which is impossible because $\mathbf{v}_1 \neq \mathbf{0}$. So j > 1, and

$$c_1\mathbf{v}_1 + \dots + c_j\mathbf{v}_j + 0\mathbf{v}_{j+1} + \dots + 0\mathbf{v}_p = \mathbf{0}$$

$$\mathbf{v}_{j} \mathbf{v}_{j} = -c_{1} \mathbf{v}_{1} - \dots - c_{j-1} \mathbf{v}_{j-1}$$
$$\mathbf{v}_{j} = \left(-\frac{c_{1}}{c_{j}}\right) \mathbf{v}_{1} + \dots + \left(-\frac{c_{j-1}}{c_{j}}\right) \mathbf{v}_{j-1} \quad \blacksquare$$

PRACTICE PROBLEMS

1. Let
$$\mathbf{u} = \begin{bmatrix} 3\\ 2\\ -4 \end{bmatrix}$$
, $\mathbf{v} = \begin{bmatrix} -6\\ 1\\ 7 \end{bmatrix}$, $\mathbf{w} = \begin{bmatrix} 0\\ -5\\ 2 \end{bmatrix}$, and $\mathbf{z} = \begin{bmatrix} 3\\ 7\\ -5 \end{bmatrix}$.

- a. Are the sets {**u**, **v**}, {**u**, **w**}, {**u**, **z**}, {**v**, **w**}, {**v**, **z**}, and {**w**, **z**} each linearly independent? Why or why not?
- b. Does the answer to Part (a) imply that $\{\mathbf{u}, \mathbf{v}, \mathbf{w}, \mathbf{z}\}$ is linearly independent?
- c. To determine if {**u**, **v**, **w**, **z**} is linearly dependent, is it wise to check if, say, **w** is a linear combination of **u**, **v**, and **z**?
- d. Is {**u**, **v**, **w**, **z**} linearly dependent?
- Suppose that {v₁, v₂, v₃} is a linearly dependent set of vectors in ℝⁿ and v₄ is vector in ℝⁿ. Show that {v₁, v₂, v₃, v₄} is also a linearly dependent set.

1.7 EXERCISES

In Exercises 1–4, determine if the vectors are linearly independent. Justify each answer.

1.
$$\begin{bmatrix} 5\\0\\0 \end{bmatrix}, \begin{bmatrix} 7\\2\\-6 \end{bmatrix}, \begin{bmatrix} 9\\4\\-8 \end{bmatrix}$$

2. $\begin{bmatrix} 0\\0\\2 \end{bmatrix}, \begin{bmatrix} 0\\5\\-8 \end{bmatrix}, \begin{bmatrix} -3\\4\\1 \end{bmatrix}$
3. $\begin{bmatrix} 1\\-3 \end{bmatrix}, \begin{bmatrix} -3\\9 \end{bmatrix}$
4. $\begin{bmatrix} -1\\4 \end{bmatrix}, \begin{bmatrix} -2\\-8 \end{bmatrix}$

In Exercises 5–8, determine if the columns of the matrix form a linearly independent set. Justify each answer.

62 CHAPTER 1 Linear Equations in Linear Algebra

9.
$$\mathbf{v}_1 = \begin{bmatrix} 1\\ -3\\ 2 \end{bmatrix}, \mathbf{v}_2 = \begin{bmatrix} -3\\ 9\\ -6 \end{bmatrix}, \mathbf{v}_3 = \begin{bmatrix} 5\\ -7\\ h \end{bmatrix}$$

10. $\mathbf{v}_1 = \begin{bmatrix} 1\\ -5\\ -3 \end{bmatrix}, \mathbf{v}_2 = \begin{bmatrix} -2\\ 10\\ 6 \end{bmatrix}, \mathbf{v}_3 = \begin{bmatrix} 2\\ -9\\ h \end{bmatrix}$

In Exercises 11–14, find the value(s) of h for which the vectors are linearly *dependent*. Justify each answer.

11.
$$\begin{bmatrix} 1\\-1\\4 \end{bmatrix}, \begin{bmatrix} 3\\-5\\7 \end{bmatrix}, \begin{bmatrix} -1\\5\\h \end{bmatrix}$$
12.
$$\begin{bmatrix} 2\\-4\\1 \end{bmatrix}, \begin{bmatrix} -6\\7\\-3 \end{bmatrix}, \begin{bmatrix} 8\\h\\4 \end{bmatrix}$$
13.
$$\begin{bmatrix} 1\\5\\-3 \end{bmatrix}, \begin{bmatrix} -2\\-9\\6 \end{bmatrix}, \begin{bmatrix} 3\\h\\-9 \end{bmatrix}$$
14.
$$\begin{bmatrix} 1\\-1\\3 \end{bmatrix}, \begin{bmatrix} -5\\7\\8 \end{bmatrix}, \begin{bmatrix} 1\\h\\h \end{bmatrix}$$

Determine by inspection whether the vectors in Exercises 15–20 are linearly *independent*. Justify each answer.

15.
$$\begin{bmatrix} 5\\1 \end{bmatrix}, \begin{bmatrix} 2\\8 \end{bmatrix}, \begin{bmatrix} 1\\3 \end{bmatrix}, \begin{bmatrix} -1\\7 \end{bmatrix}$$
 16. $\begin{bmatrix} 4\\-2\\6 \end{bmatrix}, \begin{bmatrix} 6\\-3\\9 \end{bmatrix}$
17. $\begin{bmatrix} 3\\5\\-1 \end{bmatrix}, \begin{bmatrix} 0\\0\\0 \end{bmatrix}, \begin{bmatrix} -6\\5\\4 \end{bmatrix}$ **18.** $\begin{bmatrix} 4\\4 \end{bmatrix}, \begin{bmatrix} -1\\3 \end{bmatrix}, \begin{bmatrix} 2\\5 \end{bmatrix}, \begin{bmatrix} 8\\1 \end{bmatrix}$
19. $\begin{bmatrix} -8\\12\\-4 \end{bmatrix}, \begin{bmatrix} 2\\-3\\-1 \end{bmatrix}$ **20.** $\begin{bmatrix} 1\\4\\-7 \end{bmatrix}, \begin{bmatrix} -2\\5\\3 \end{bmatrix}, \begin{bmatrix} 0\\0\\0 \end{bmatrix}$

In Exercises 21 and 22, mark each statement True or False. Justify each answer on the basis of a careful reading of the text.

- **21.** a. The columns of a matrix A are linearly independent if the equation $A\mathbf{x} = \mathbf{0}$ has the trivial solution.
 - b. If *S* is a linearly dependent set, then each vector is a linear combination of the other vectors in *S*.
 - c. The columns of any 4×5 matrix are linearly dependent.
 - d. If x and y are linearly independent, and if {x, y, z} is linearly dependent, then z is in Span {x, y}.
- **22.** a. Two vectors are linearly dependent if and only if they lie on a line through the origin.
 - b. If a set contains fewer vectors than there are entries in the vectors, then the set is linearly independent.
 - c. If x and y are linearly independent, and if z is in Span {x, y}, then {x, y, z} is linearly dependent.
 - d. If a set in \mathbb{R}^n is linearly dependent, then the set contains more vectors than there are entries in each vector.

In Exercises 23–26, describe the possible echelon forms of the matrix. Use the notation of Example 1 in Section 1.2.

23. *A* is a 3×3 matrix with linearly independent columns.

- **24.** *A* is a 2×2 matrix with linearly dependent columns.
- **25.** A is a 4×2 matrix, $A = [\mathbf{a}_1 \ \mathbf{a}_2]$, and \mathbf{a}_2 is not a multiple of \mathbf{a}_1 .
- **26.** A is a 4×3 matrix, $A = [\mathbf{a}_1 \ \mathbf{a}_2 \ \mathbf{a}_3]$, such that $\{\mathbf{a}_1, \mathbf{a}_2\}$ is linearly independent and \mathbf{a}_3 is not in Span $\{\mathbf{a}_1, \mathbf{a}_2\}$.
- **27.** How many pivot columns must a 7×5 matrix have if its columns are linearly independent? Why?
- **28.** How many pivot columns must a 5×7 matrix have if its columns span \mathbb{R}^5 ? Why?
- **29.** Construct 3×2 matrices *A* and *B* such that $A\mathbf{x} = \mathbf{0}$ has only the trivial solution and $B\mathbf{x} = \mathbf{0}$ has a nontrivial solution.
- **30.** a. Fill in the blank in the following statement: "If A is an $m \times n$ matrix, then the columns of A are linearly independent if and only if A has _____ pivot columns."
 - b. Explain why the statement in (a) is true.

Exercises 31 and 32 should be solved *without performing row operations*. [*Hint:* Write $A\mathbf{x} = \mathbf{0}$ as a vector equation.]

31. Given
$$A = \begin{bmatrix} 2 & 3 & 5 \\ -5 & 1 & -4 \\ -3 & -1 & -4 \\ 1 & 0 & 1 \end{bmatrix}$$
, observe that the third column

is the sum of the first two columns. Find a nontrivial solution of $A\mathbf{x} = \mathbf{0}$.

32. Given
$$A = \begin{bmatrix} 4 & 1 & 6 \\ -7 & 5 & 3 \\ 9 & -3 & 3 \end{bmatrix}$$
, observe that the first column

plus twice the second column equals the third column. Find a nontrivial solution of $A\mathbf{x} = \mathbf{0}$.

Each statement in Exercises 33–38 is either true (in all cases) or false (for at least one example). If false, construct a specific example to show that the statement is not always true. Such an example is called a *counterexample* to the statement. If a statement is true, give a justification. (One specific example cannot explain why a statement is always true. You will have to do more work here than in Exercises 21 and 22.)

- **33.** If $\mathbf{v}_1, \ldots, \mathbf{v}_4$ are in \mathbb{R}^4 and $\mathbf{v}_3 = 2\mathbf{v}_1 + \mathbf{v}_2$, then $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \mathbf{v}_4\}$ is linearly dependent.
- **34.** If $\mathbf{v}_1, \ldots, \mathbf{v}_4$ are in \mathbb{R}^4 and $\mathbf{v}_3 = \mathbf{0}$, then $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \mathbf{v}_4\}$ is linearly dependent.
- **35.** If \mathbf{v}_1 and \mathbf{v}_2 are in \mathbb{R}^4 and \mathbf{v}_2 is not a scalar multiple of \mathbf{v}_1 , then $\{\mathbf{v}_1, \mathbf{v}_2\}$ is linearly independent.
- **36.** If $\mathbf{v}_1, \ldots, \mathbf{v}_4$ are in \mathbb{R}^4 and \mathbf{v}_3 is *not* a linear combination of $\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_4$, then $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \mathbf{v}_4\}$ is linearly independent.
- **37.** If $\mathbf{v}_1, \ldots, \mathbf{v}_4$ are in \mathbb{R}^4 and $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\}$ is linearly dependent, then $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \mathbf{v}_4\}$ is also linearly dependent.
- **38.** If $\mathbf{v}_1, \ldots, \mathbf{v}_4$ are linearly independent vectors in \mathbb{R}^4 , then $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3\}$ is also linearly independent. [*Hint:* Think about $x_1\mathbf{v}_1 + x_2\mathbf{v}_2 + x_3\mathbf{v}_3 + 0 \cdot \mathbf{v}_4 = \mathbf{0}$.]

1.8 Introduction to Linear Transformations **63**

- **39.** Suppose *A* is an $m \times n$ matrix with the property that for all **b** in \mathbb{R}^m the equation $A\mathbf{x} = \mathbf{b}$ has at most one solution. Use the definition of linear independence to explain why the columns of *A* must be linearly independent.
- **40.** Suppose an $m \times n$ matrix A has n pivot columns. Explain why for each **b** in \mathbb{R}^m the equation $A\mathbf{x} = \mathbf{b}$ has at most one solution. [*Hint:* Explain why $A\mathbf{x} = \mathbf{b}$ cannot have infinitely many solutions.]

[M] In Exercises 41 and 42, use as many columns of A as possible to construct a matrix B with the property that the equation $B\mathbf{x} = \mathbf{0}$ has only the trivial solution. Solve $B\mathbf{x} = \mathbf{0}$ to verify your work.

$$\mathbf{41.} \ A = \begin{bmatrix} 8 & -3 & 0 & -7 & 2 \\ -9 & 4 & 5 & 11 & -7 \\ 6 & -2 & 2 & -4 & 4 \\ 5 & -1 & 7 & 0 & 10 \end{bmatrix}$$

$$\mathbf{42.} \ A = \begin{bmatrix} 12 & 10 & -6 & -3 & 7 & 10 \\ -7 & -6 & 4 & 7 & -9 & 5 \\ 9 & 9 & -9 & -5 & 5 & -1 \\ -4 & -3 & 1 & 6 & -8 & 9 \\ 8 & 7 & -5 & -9 & 11 & -8 \end{bmatrix}$$

- **43.** [**M**] With *A* and *B* as in Exercise 41, select a column **v** of *A* that was not used in the construction of *B* and determine if **v** is in the set spanned by the columns of *B*. (Describe your calculations.)
- **44. [M]** Repeat Exercise 43 with the matrices *A* and *B* from Exercise 42. Then give an explanation for what you discover, assuming that *B* was constructed as specified.

SOLUTIONS TO PRACTICE PROBLEMS

- 1. a. Yes. In each case, neither vector is a multiple of the other. Thus each set is linearly independent.
 - b. No. The observation in Part (a), by itself, says nothing about the linear independence of {**u**, **v**, **w**, **z**}.
 - c. No. When testing for linear independence, it is usually a poor idea to check if one selected vector is a linear combination of the others. It may happen that the selected vector is not a linear combination of the others and yet the whole set of vectors is linearly dependent. In this practice problem, \mathbf{w} is not a linear combination of \mathbf{u} , \mathbf{v} , and \mathbf{z} .
 - d. Yes, by Theorem 8. There are more vectors (four) than entries (three) in them.
- 2. Applying the definition of linearly dependent to $\{v_1, v_2, v_3\}$ implies that there exist scalars c_1, c_2 , and c_3 , not all zero, such that

$$c_1\mathbf{v}_1 + c_2\mathbf{v}_2 + c_3\mathbf{v}_3 = \mathbf{0}.$$

Adding $0 \mathbf{v}_4 = \mathbf{0}$ to both sides of this equation results in

$$c_1\mathbf{v}_1 + c_2\mathbf{v}_2 + c_3\mathbf{v}_3 + 0\,\mathbf{v}_4 = \mathbf{0}.$$

Since c_1, c_2, c_3 and 0 are not *all* zero, the set { v_1, v_2, v_3, v_4 } satisfies the definition of a linearly dependent set.

1.8 INTRODUCTION TO LINEAR TRANSFORMATIONS

The difference between a matrix equation $A\mathbf{x} = \mathbf{b}$ and the associated vector equation $x_1\mathbf{a}_1 + \cdots + x_n\mathbf{a}_n = \mathbf{b}$ is merely a matter of notation. However, a matrix equation $A\mathbf{x} = \mathbf{b}$ can arise in linear algebra (and in applications such as computer graphics and signal processing) in a way that is not directly connected with linear combinations of vectors. This happens when we think of the matrix *A* as an object that "acts" on a vector \mathbf{x} by multiplication to produce a new vector called $A\mathbf{x}$.
